

AQUARMOR

Product Description

AQUARMOR® is a concentrated thiocarbamate-based biocide used in water-base drilling, completion, workover and packer fluids. It is an effective biocide at low concentration levels. AQUARMOR® can be used in any water-base mud to control the growth of bacteria and fungus. It can be used with oxygen scavenger, but is not compatible with sulphite and bisulfite-based scavengers.

Applications/Functions

- Used in water-based drilling fluids to control bacteria
- Also suitable in completion/workover fluids, and packer fluids
- Used as waste water treatment

Advantages

- Effective against a broad range of microbes, bacteria and fungi
- Compatible with most water-based drilling fluids

Typical Properties

- Appearance: Pale yellow liquid
- Flash point: > 212 °F
- Specific gravity: 1.05

Recommended Treatment

- Water-based drilling fluids: 0.1-0.5 ppb
- Brines: 0.35-0.5 ppb

Package

- 5 GAL PAIL
