

## FOAMTREAT:

FOAMTREAT®HP is high-performance defoamer combined the advantages of both polyether and silicone used in water base drilling fluid, completion fluid and workover fluid, especially in reservoir drill-in fluid. The defoamer can be readily added to water-base fluids to prevent or control foaming, particularly when surfactant additives are used. The defoamer is compatible with brine systems and fluid-loss-control pills. FOAMTREAT®HP defoamer has minimal impact on fluid rheology and performs well in both monovalent and divalent brines.

### Applications/Functions

- Used in water base drilling fluid, completion fluid and workover fluid
- Compatible with brine systems and fluid-loss-control pills

### Advantages

- Defoaming quickly
- Long foam suppression time
- Effective at low concentration
- Non-toxicity product and environmentally acceptable

### Typical Properties

- Appearance: Milky white liquid
- Specific gravity: 1.0

### Recommended Treatment

- A typical treatment range is 0.05-0.2 ppb

### Package

- 5 L PAIL
